– **Professor Richard Brealey**, London Business School (from the Foreword)

*“Estimating the cost of capital is critical in determining the valuation of assets, in evaluating the capital structure of corporations, and in estimating the long run expected return of investments. Shannon Pratt and Roger Grabowski have the most thorough text on the subject, not only providing various estimation methods, but also numerous ways to use the cost of capital.”*

# Introduction

The hardcover *2015 Valuation Handbook – Industry Cost of Capital* is published with data through March 2015, and includes three intra-year Quarterly Updates (June, September, and December 2015), delivered in Adobe PDF format.<sup>1,2</sup>

The *2015 Valuation Handbook – Industry Cost of Capital* provides cost of capital estimates (i.e., equity capital, debt capital, and WACC) for approximately 200 U.S. industries (identified by Standard Industrial Classification (SIC) code) and size groupings (i.e., Large-, Mid-, Low-, and Micro-capitalization companies), plus detailed statistics for sales, market capitalization, capital structure, various levered and unlevered beta estimates (e.g., ordinary least squares (OLS) beta, sum beta, downside beta, etc.), valuation (trading) multiples, financial and profitability ratios, equity returns, aggregate forward-looking earnings-per-share (EPS) growth rates, and more. The information and statistics in the *2015 Valuation Handbook – Industry Cost of Capital* can be used by the analyst to (i) benchmark, (ii) augment, and (iii) support his or her own custom analysis of the industry in which a subject business, business ownership interest, security, or intangible asset resides.<sup>3</sup>

The information in the *2015 Valuation Handbook – Industry Cost of Capital*, “Company and SIC List” (this document) is a list of the companies used in the approximate 200 U.S. industry analyses presented in the *2015 Valuation Handbook – Industry Cost of Capital* (data through March 2015). As such, the information herein is specific to the *2015 Valuation Handbook – Industry Cost of Capital* (data through March 2015), and is not applicable to any other book, update, or document.

## Company and SIC Lists

The company screening process used for identifying the main set of “healthy” companies used for the analyses presented in the *2015 Valuation Handbook – Industry Cost of Capital* mimics the screening process employed in the Risk Premium Report Study Exhibits that are published in the *2015 Valuation Handbook – Guide to Cost of Capital*.

The set of companies remaining after this screening process (i) are “seasoned” companies in that they have been traded for several years, (ii) have been selling at least a minimal quantity of product or services, and (iii) have been able to achieve a degree of positive cash flow from operations. The last step in this screening process is identifying “pure play” companies. Pure play companies are defined here as those companies that derive at least 75% of their overall revenue from a single SIC code. The companies identified in this process (“Main Set”) are used in the analyses to calculate the “Median”, “SIC Composite”, “Large Composite”, and “Small Composite” metrics for each industry (data availability allowing).

---

<sup>1</sup> Quarterly Updates are optional, and are not sold separately.

<sup>2</sup> The *2014 Valuation Handbook – Industry Cost of Capital* was published with data through March 2014, and also included optional June, September, and December (2014) Quarterly Updates.

<sup>3</sup> Also published by John Wiley & Sons, the *2015 Valuation Handbook – Guide to Cost of Capital* provides key year-end data previously available in (i) the Morningstar/Ibbotson *S&P 500 Valuation Yearbook* and (ii) the Duff & Phelps *Risk Premium Report*. The *2015 Valuation Handbook – Guide to Cost of Capital* can be used to develop cost of equity capital estimates for an *individual* business, business ownership interest, security, or intangible asset.

Please note that “high-financial-risk” companies (“High-Financial-Risk Set”) are identified and analyzed separately. A list of companies included in the High-Financial-Risk Set analyses is presented in Appendices C and D.

For a detailed discussion of the company set selection process employed in the *2015 Valuation Handbook – Industry Cost of Capital* and its quarterly updates, please refer to the section entitled “Company Screening Process” in that book.
